PROJECTS

1) AI based chat-bot using AIML and Python

Final year project in a team of 2 - My job was to write the backend code logic in python whereas the other student built frontend UI.

2) Online examination system (OES)

3rd year project in a team of 3 - My job was to make a fully secured OES portal and now this project is used in my university itself for internal test of students.

3) Some Python Tools for easing my reconnaissance phase during hacking
